> Generated from the project's records in NetZero at the date and time above: the values recorded against each requirement, the files attached against each required document, and the AI's advisory read of those files. Nothing on this document was typed in by hand. A document reads Provided only when a file is attached against it. This is not a log of dated site inspections; where the manual asks for one, it is among the required documents below and the contractor's own sheets are what is attached there.

AIM

To reduce the adverse environmental and social impacts of construction activities by implementing environmental management best practices.

REQUIRED DOCUMENTS AT A GLANCE

4	2	0	0	2
DOCUMENTS LISTED	DUE AT THIS STAGE	PROVIDED	WITH GAPS (AI)	MISSING

Requirements and required documents

Project at Design stage

#1 — Not Started

Develop and implement a Construction Environmental Management Plan (CEMP) to address the environmental and social impacts of construction activities. The CEMP must be developed in accordance with the regulations of the General Authority of Meteorology & Environment Protection and must be evaluated and approved by a qualified Environmental Professional.

Recorded value —

Required document	Stage	State
☐ Extract from project tender specifications confirming that a CEMP will be produced by the Contractor prior to the start of construction activities on site.	DESIGN	Missing
☐ CV of qualified Environmental Professional.	DESIGN	Missing
☐ CEMP developed in accordance with the General Authority of Meteorology & Environment Protection's regulations. Refer to Supporting Guidance for additional information.	CONSTRUCTION	Not due yet
☐ Site audit report provided by the contractor which includes photographic evidence verifying compliance with the CEMP.	CONSTRUCTION	Not due yet

What the manual requires the plan to contain

From the credit's supporting guidance (manual pp.41–45).

Construction Environmental Management Plan

The CEMP must include the following as a minimum:

- [ ] Comprehensive Environmental Impact Assessment (EIA)
  - [ ] The EIA should address the impact of the project on air quality, soil, topography, surface and ground water, land environment (flora/fauna), marine and coastal environment and land-use purpose.
  - [ ] The EIA should build upon the Ecological Assessment Report and Ecological Protection Plan created for credit SS-02 Ecological Assessment and Protection and include an assessment of any significant impacts not covered by these documents and the associated mitigation measures.
- [ ] Construction dust control plan
  - [ ] Perform onsite measurement of particulate matter (PM) in the air during peak construction activity.
  - [ ] Particulate matter limits must follow National Ambient Air Quality Standards (NAAQS) from the Environmental Protection Agency.
  - [ ] Isolate dust-producing activities.
- [ ] Construction noise pollution monitoring plan
  - [ ] Conduct planned monitoring of noise levels at a 15-meter buffer from construction activity.
  - [ ] Noise limits should follow Commonwealth of Massachusetts Section 721.560 Construction Noise Control guidelines.
- [ ] Construction waste management plan
  - [ ] Refer to credit MW-02 Construction Waste Management.
  - [ ] Implementation of proper hazardous waste handling measures based on technical specifications.
  - [ ] Controlled onsite storage and segregation of hazardous waste from non-hazardous waste.
  - [ ] An approved waste hauler is retained for transporting waste from the project site to relevant facility.
- [ ] Energy and water consumption reduction plan
  - [ ] Energy conservation – implement at least two of the following conservation strategies:
    - [ ] Use of certified energy efficient generators, fuel-efficient transportation methods, renewable energy sources, and/or automated lighting controls.
    - [ ] Workers living within a 25km radius of the construction site and/or coordination of transportation requirements.
    - [ ] Controlled operation of temporary air-conditioning systems.
    - [ ] Monitoring and record-keeping of energy usage against a pre-determined baseline, and implementation of mitigation measures if consumption levels exceed expected range.
  - [ ] Water conservation – implement at least two of the following conservation strategies:
    - [ ] Use of water efficient fixtures.
    - [ ] Create a water conservation strategy which minimizes wastage of water through user negligence, inefficient operations and/or leakages.
    - [ ] Use of non-potable water for construction processes e.g. secondary treatment and recycling of greywater or blackwater for irrigation, dust control, and flushing.
    - [ ] Limit access of water-using equipment to trained users only.
    - [ ] Monitoring and record-keeping of water consumption against a pre-determined baseline, and implementation of mitigation measures if consumption levels exceed expected range.
- [ ] Site Audit Plan
  - [ ] Audits should be conducted regularly, the frequency of which should be determined by the contractor based on the total length of construction time and the duration of specific activities that might require more supervision.
  - [ ] A report is to be produced following each site audit. The site audit report must include:
    - [ ] Date-stamped photographs
    - [ ] An update on all priority CEMP plans: dust control, noise control, non-hazardous and hazardous waste management, and energy and water conservation
    - [ ] Responses to observed deviations from the CEMP with mitigation and remediation measures
    - [ ] Verification that all mitigation and remediation measures have been implemented
- [ ] Construction materials' transportation and procurement plan
  - [ ] Use of materials that are extracted, processed and/or manufactured within the Gulf Cooperation Council (GCC) area.

Environmental Professional

A suitably qualified Environmental Professional is an individual who is registered with the General Authority of Meteorology & Environmental Protection and has achieved the following:

- [ ] An environmental degree or equivalent qualification/certification in sustainable construction.
- [ ] A minimum of three years of relevant experience in implementing sustainable construction practices as well as acting in an advisory role providing recommendations for best practices in construction and mitigation measures.

These boxes are left blank on purpose. They list what the manual requires the plan to contain; whether the uploaded plan covers each one is for the reviewer to judge against the document itself.
