INSPECTION SHEET · SS-03 CONSTRUCTION ENVIRONMENTAL MANAGEMENT

Erosion & Sedimentation Control Inspection and Corrective Action Log

Riyadh Marina Tower · Mostadam commercial D+C (2019) · Construction stage · manual pp.41–45

Ref No MBL-JCD-ESC-001 **Inspection date** 30 May 2026

Time 09:00 **Inspected by** Waqar Ahmed

No	Description	Yes	No	NA	Notes/Comments/Non-Conformances
1	**Dust control and soil erosion by wind**				
1.1	Are soil stockpiles adequately covered or stabilized	**YES**			Yes, the topsoil stockpile is adequately covered with sheet to minimize erosion and dust generation.
1.2	Are hauling loads are covered with a screen or moistened during transfer	**YES**			
1.3	Is housekeeping on the hauling roads is regular and adequate?	**YES**			
1.4	Is perimeter fencing effective in reducing wind speed causing soil erosion?			**N/A**	Wind will not cause any soil erosion due to high moisture in the soil.
1.5	Is there any damage in perimeter fencing?		**NO**		Fencing around the site is well-maintained. Refer to fig #01
1.6	Is there a dust problem prevailing on the construction site		**NO**		All the vehicle and pedestrian routes are well-maintained.
2	**Stormwater control measures**				
2.1	Is there any incidence of rain in the last 24 hours?		**NO**		
2.2	Do you have storm water-control measures in place?	**YES**			
2.3	Do you have earth bund around the site for the diversion of stormwater entering to your site from the surrounding area?	**YES**			
2.4	Is it effective during rain?				
2.5	Do you have provision for sedimentation control?				
2.6	Is the stormwater discharge point is protected from siltation?	**YES**			
2.7	Is there any sedimentation basin for settling storm water prior to discharge into storm waterline?				
2.8	Is there use of silt screen (Geo-textile) in storm water channel inside the site?				
2.9	Is there any damage to silt curtain?				

No	Description	Yes	No	NA	Notes/Comments/Non-Conformances
2.10	Do you allow settling of sediments within the project area?				
2.11	Is it changed regularly in the event of clogging after a rain incidence?				
3	**Dewatering water**				
3.1	Do you have provision for dewatering water to control sedimentation.	**YES**			
3.2	Is there sedimentation tank for settling of groundwater prior to disposal?	**YES**			
3.3	Do you have any other measures to control sedimentation and erosion from dewatering water?	**YES**			
3.4	Do you allow infiltration of dewatering water?				
4	**Housekeeping**				
4.1	Is the project area being tidy and clean?	**YES**			
4.2	Is proper storage and stacking of material at the staging area?	**YES**			
4.3	Is waste properly collected and disposed of in a timely manner?	**YES**			
4.4	Is there safekeeping of hazardous material?	**YES**			
4.5	Is there any spill or leak at site?		**NO**		Spills and leakages are cleaned immediately, when occurred.
4.6	Is the concrete washout area being in order and regular maintenance is there?			**N/A**	
4.7	Is there any vehicular maintenance at the site?		**NO**		Vehicle maintenance isn't allowed at the project site.
