

NetZero Platform — User Feedback & Comments Log

Project: Jeddah Central Oceanarium — Mostadam Commercial D+C v1.0-2019 (Design Stage)

Platform: NetZero (Railway-hosted Mostadam credit compliance platform)

Prepared: 2026-08-31

Purpose

This document consolidates all comments, bug reports, and feature requests raised regarding the NetZero platform's evidence-upload, dashboard, credit-tracking, and reporting functionality. These items are intended to be reviewed and actioned by the platform development team to support full credit-compliance lifecycle management (risk assessment, credit review, and gap identification) for Mostadam certification tracking.

Consolidated Comments

#	Type	Comment
1	Feature / Correction	Evidence upload should not be marked "Optional." Wherever the platform currently labels evidence upload as optional, it should be changed to mandatory/required.
2	Feature	The system must support multiple attachments per credit, not a single file only. Upload and remove option should be there
3	Feature	For approved shop drawings (and similar document uploads), there should be an "Additional Attachments" option.
4	Bug	Attempted to attach the Labor Subsistence Plan to credit PMM-03 (Fair Labor Practices) — the file did not shown after uploading, and no attachment is visible/confirmed after upload.
5	Feature	Need a removal/delete option for attached files, so outdated versions can be removed when replaced with updated ones instead of accumulating and consuming storage.
6	Feature	After a document is uploaded, the AI should automatically review the full document against the relevant credit's requirements. Specifically for plans (e.g. Labor Subsistence Plan), it should assess and flag whether the plan meets or does not meet the credit requirement.
7	Bug	Dashboard top cards are not clickable/responsive — clicking them produces no action or reaction.
8	Feature	After uploading a scorecard or creating a new project, there should be an option to download an Excel export containing: all credits with total available points and targeted points; current status per credit; and credits that are not targeted, clearly labeled as such.

9	Feature	A checklist of required documents should be shown per credit (list of required documents / checkbox format), so the user can see at a glance what's needed and what's been provided.
10	Feature	Uploaded documents should be visible directly under the relevant credit, not buried elsewhere, so evidence is immediately traceable to its credit.
11	Feature	Add a progress dial/gauge showing current status of total points achieved: (a) an overall project-level dial showing total points progress toward target/certification level, and (b) a per-credit dial showing that individual credit's current status.
12	Bug	The Credit tab under the project is not working — clicking it should navigate to/open the relevant project's credit view, but currently does not.
13	Feature	Ability to upload additional/more documents on an ongoing credit .
14	Feature	For credits with multiple requirements (e.g. two or three sub-requirements), there should be a checkbox per requirement indicating which specific requirement(s) are being met and which are not, rather than only a single status for the whole credit.
